

TRUTHLENS Brand Guidelines

Version 1.0

Tagline: See Beyond the Screen

Introduction

Welcome to TruthLens. We are not just building a platform; we are fostering a generation of critical thinkers. This document outlines the core components of our brand identity. By adhering to these guidelines, we ensure that TruthLens communicates with a singular, powerful, and trustworthy voice across the globe.

SECTION 1 — Brand Foundation

The bedrock of our organization defines why we exist and how we behave.

1.1 Vision

A digital world where young citizens are empowered with the critical thinking skills to instinctively question, verify, and understand the media they consume, ensuring a healthy information ecosystem.

1.2 Mission

To build immunity against misinformation, deepfakes, and manipulated media in youth audiences through accessible, AI-powered media literacy education and verification tools.

1.3 Core Values

Integrity First: Our tools are objective, transparent, and evidence-based. Trust is our currency.

Empowerment: We teach *how* to think, not *what* to think.

Innovation for Good: We harness advanced AI ethically to solve a human crisis.

Global Inclusivity: Media literacy is a universal right; our platform is designed for diverse languages and contexts.

1.4 Brand Promise

To provide immediate, intelligent, and educational verification, transforming passive media consumers into active information evaluators.

SECTION 2 — Brand Personality

How TruthLens "speaks" and conducts itself.

2.1 Tone of Voice

Our voice is:

Intelligent but Accessible: We are experts in AI and media, but we explain complex concepts clearly.

Authoritative but Non-Judgmental: We provide facts, not opinions. We guide, we don't lecture.

Optimistic and Urgent: We face a crisis, but we believe education is the solution.

2.2 Communication Style

Direct and Transparent: Avoid jargon when possible; if AI terminology is necessary, define it immediately.

Educational at Every Touchpoint: Every interaction should teach the user *because* a piece of media was flagged, not just *that* it was flagged.

Action-Oriented: We encourage verification and critical questioning before sharing.

2.3 Messaging Principles

Truth over Sensation: We counteract inflammatory media with calm, factual reporting.

Focus on the Mechanism: Educate users on *how* a deepfake is made or *how* context is manipulated, empowering them to spot these techniques elsewhere.

Human-Centered: Technology is the tool; human judgment is the goal.

SECTION 3 — Visual Identity

This section defines the usage of the master assets.

3.1 Logo Usage Rules

Our identity is paramount. Consistency builds recognition. Use the assets exactly as provided.

Primary Logo (Stacked): The default logo for central applications (e.g., website headers, splash screens, title slides).

Horizontal Logo: Used when vertical space is restricted (e.g., website navigation bars, document footers).

Brand Mark ("The Verified Lens"): The standalone symbol. Used only when the brand is already established (e.g., profile pictures, favicons, app navigation icons).

3.2 Clear Space Rules

To maintain integrity and impact, the logo must always have a minimum amount of "breathing room."

Clear Space: The clear space surrounding all logo variants must be equal to X, where X is the width of the main 'T' stem in the wordmark. No other graphic elements, text, or page borders may infringe upon this space.

3.3 Logo Don'ts

Maintaining consistency means understanding improper usage.

DO NOT stretch, condense, or distort the logo in any way.

DO NOT rotate the logo.

DO NOT change the colors or the direction of the gradient.

DO NOT apply shadows, glows, or bevels.

DO NOT use the logo on low-contrast backgrounds or complex busy imagery.

DO NOT rearrange the components of the logo (e.g., placing the text *above* the mark).

DO NOT add taglines or other text directly to the logo lockup.

3.4 Iconography Style

Icons must be supportive of the brand's minimalist, intelligent tech personality.

Style: Monoline, geometric, and minimalist.

Weight: All icons should maintain a consistent stroke weight that matches the secondary (Medium) weight of our primary typeface.

Corners: All corners should be slightly rounded, mirroring the curves in "The Verified Lens."

Usage: Icons are functional tools (e.g., "Search," "Verify," "Alert"). They should never be purely decorative.

SECTION 4 — Color System

Our palette balances established trust (Blue) with technical innovation (Cyan) and human positivity/Go (Green).

Primary Colors

#0B132B (Oxford Blue)

The foundation of trust, authority, and depth. Used for typography and backgrounds.

HEX: #0B132B

RGB: (11, 19, 43)

CMYK: (92, 78, 51, 62)

Accessibility: Passes WCAG AAA for contrast when used with white or cyan typography.

#00D4FF (Vivid Cyan)

Innovation, transition, and clarity. Used for highlights, accents, and the 'verification' aspect.

HEX: #00D4FF

RGB: (0, 212, 255)

CMYK: (60, 0, 0, 0)

Accessibility: Passes WCAG AA for contrast when used with dark blue backgrounds.

#2DD881 (Teal Green)

Positivity, action, education, and 'Go' (verified). Used for success states and educational callouts.

HEX: #2DD881

RGB: (45, 216, 129)

CMYK: (65, 0, 70, 0)

Accessibility: Excellent for informational callouts. Not suitable as a text background color against white.

SECTION 5 — Typography

Our fonts provide the authoritative, technical, and clean aesthetic necessary for a global platform.

5.1 Primary Font: Inter

Inter is our primary, definitive typeface. It is open-source, exceptionally clean, and designed specifically for user interfaces. It communicates precision, modernity, and authoritative clarity.

Usage: All headings, UI labels, buttons, and short body copy in the app and website.

5.2 Secondary Font: Lato

Lato is our supportive, "humanist" sans-serif. It is approachable and slightly warmer, suitable for longer reading.

Usage: Long-form body copy (e.g., educational articles, documentation, policy pages).

5.3 Arabic Font: Cairo

For our global, multilingual initiative (including UNESCO regions), *Cairo* is selected for Arabic scripts. It is a modern, geometric sans-serif that balances traditional calligraphic structure with contemporary screen legibility, complementing *Inter* perfectly.

Usage: All Arabic headings and UI elements.

5.4 Hierarchy System

Maintaining a clear visual structure is essential for educational platforms.

Element	Font	Weight	Size (Desktop/Mobile)	Color
Headline 1	Inter	Semi-Bold	48px / 32px	#0B132B
Headline 2	Inter	Semi-Bold	32px / 24px	#0B132B
Headline 3 (UI)	Inter	Medium	20px / 18px	#0B132B / #00D4FF
Body (UI labels)	Inter	Regular	16px / 14px	#0B132B
Body (Articles)	Lato	Regular	18px / 16px	#0B132B
Button Text	Inter	Semi-Bold	16px / 16px	White

SECTION 6 — UI Design Language

The app and dashboard interface should be clean, functional, and highly intuitive, adhering to a minimalist, Notion-like structure with high precision (Apple-tier focus).

6.1 Buttons

Style: Flat, geometric, rectangular with subtle rounded corners (matching the iconography/lens curve).

Primary Action (Verify): Filled #00D4FF (Cyan) with white text. Hover state #0B132B.

Secondary Action (Learn More): Outlined (1px #0B132B) with #0B132B text.

Success (Correct Verification): Filled #2DD881 (Green).

6.2 Cards (Educational Content)

Style: Simple, rectangular, white cards with extremely subtle depth (e.g., box-shadow: 0px 4px 12px rgba(11, 19, 43, 0.05)).

Content: A card should contain one idea: Icon (functional), Title (e.g., "Deepfake Detected"), brief explanation, and action (Learn Why).

6.3 Alerts (Verification Results)

Crucially: Use our defined color semantics strictly.

Low Risk (Verified): Light Green (#2DD881 at 15% opacity) background with #2DD881 text and icon (Checkmark).

Medium Risk (Manipulated): Light Cyan (#00D4FF at 15% opacity) background with #00D4FF text and icon (Warning Triangle).

High Risk (Deepfake/Misinformation): Light Blue (#0B132B at 10% opacity) background with #0B132B text and icon (Alert Circle).

6.4 Forms

Style: Minimalist inputs. Placeholders and labels use Inter (Regular) in #0B132B. Active/Focus state uses #00D4FF outline.

6.5 Dashboard Components

Navigation: Clean, left-aligned, vertical navigation (Notion-like structure). Icons are critical identifiers. Use Inter for navigation links.

Verification Feed: A structured, vertical timeline layout. Each media item checked has a card (6.2) and a clear color-coded alert status (6.3).

SECTION 7 — Photography Style

TruthLens is an educational tool focused on reality versus manipulation. We do not use highly stylized "tech stock" imagery.

Aesthetic: Human, authentic, journalistic, and observant.

Subject Matter: Young people in diverse global settings interacting with media (phones, tablets, laptops) *thoughtfully*. Focus on the *process* of questioning: a curious expression, teamwork while verifying, or a close-up of a screen showing the TruthLens app in action.

Treatment: Minimal filtering. Natural light is prioritized. Colors should be true-to-life, not overly saturated. Avoid cliché 'hacker' imagery (green matrix text over dark faces) or generic AI brains.

SECTION 8 — Illustration Style

Used when photography is unavailable, sensitive, or technical (e.g., explaining AI mechanisms).

Style: Modern, flat vector illustration with clean lines and subtle gradients (matching the lens gradient technique). The tone must be friendly (Duolingo-like positivity) but intellectually rigorous (Apple-tier precision).

Palette: Restricted to our core three colors plus white/light gray.

Composition: Minimalist. Clear subject against a plain background. Illustrations should always simplify complexity, never add decorative noise.

SECTION 9 — Social Media Style

Our social presence must cut through the noise, mirroring our mission: creating clarity from chaos.

Aesthetic: Bold, educational, high-contrast, and fast-paced.

Templates: All graphics must include the "Verified Lens" mark or primary horizontal logo.

Messaging: Focus on "Verification in Action." Use quick, 15-second "Spot the Fake" videos, educational explainers (e.g., "3 signs of a manipulated photo"), and sharing key platform success metrics.

Palette: Use our high-contrast combinations (#0B132B background with #00D4FF / #2DD881 highlights).

SECTION 10 — Pitch Deck Style

When presenting to UNESCO, investors, or partners, we must project sophisticated authority and technical capability.

Aesthetic: Sophisticated minimalism.

Slides: Restricted to ONE idea per slide. Use extensive clear space. Focus on data visualization over large blocks of text.

Typography: Strict adherence to *Inter* hierarchy (Section 5).

Palette: Maintain the high-trust dark blue (#0B132B) as the dominant background color for introductory and concluding slides. Internal slides use a clean white background with the gradient mark as the primary accent. Avoid distracting slide transitions or animations.
